

Bangladesh Weather and Climate Services Regional Project (BWCSR)

Strengthening Hydrological Information Services and Early Warning Systems (SHEWS), Component – B

Disclosure of Social Impact Screening for 315 Automatic Water Level Gauge (AWLG) under package BWDB-G2

The government of Bangladesh is implementing the Weather and Climate Services Regional Project (BWCSR) with IDA credit in order to strengthen Government of Bangladesh's capacity to deliver reliable weather, water and climate information services and improve access to such services by priority sectors and communities. The project comprises of three components. Out of three components BWDB is implementing Component –B. There are a number of packages under this component. The package No. BWDB- G2, 315 Automatic Water Level Gauge (AWLG).

The installation of Automatic Water Level Stations shall be placed in a suitable position with existing bridge structure where ever possible and the final point of installation will be fixed upon discussion and approval of Client.

The locations of poles for mounting the radars will also be finalized after discussions with BWDB officials. Different alternative sites were explored for selecting the most suitable sites for installation taking into account concerned social issues. It was observed from the screening that the installations will not require land acquisition, resettlement, relocation and will not have negative livelihood impacts. As all the construction/installation activities will be conducted on BWDB and other government lands through MoU. No negative impacts are expected. During the AWLG installation no need to turn off the bridge or traffic. The sensor will be hanging on the bridge so no space will be required.

Typical Instillation of AWLG over a Bridge

However, if any unexpected negative impacts are identified during implementation, project will take necessary steps to mitigate the impacts following the guidelines suggested in SMF and RPF. On the other hand, according to the local stakeholders' opinion, significant positive social and livelihood impacts are expected from the project as installation of the Automatic Water Level Gauge (AWLG) will provide real time weather data which will help save lives and properties all over the country. Installation of the above will require only few labors which will not cause any labor influx and working conditions of the labors and safety measures will be ensured. No works will be done/is being done on indigenous people's land.

The disclosure contains assessment of social impact for supply and installation of 315 Automatic Water Level Gauge (AWLG) and social impact screening worksheet.
