

## **Bangladesh Weather and Climate Services Regional Project (BWCSR)**

### **Disclosure of Environmental Impact Screening for up gradation of existing 629 ground water stations and 276 new nested ground water stations total 905 stations of Component - B under package BWDB-G1**

The government of Bangladesh is implementing the Weather and Climate Services Regional Project (BWCSR) with IDA credit in order to strengthen Government of Bangladesh's capacity to deliver reliable weather, water and climate information services and improve access to such services by priority sectors and communities. The project comprises of three components. Out of these components Bangladesh Water Development Board (BWDB) is implementing Component -B. There are a number of packages under this component. The package no. BWDB-G1 includes up gradation of 629 existing ground water stations from manual to automatic and 276 new nested ground water stations at 69 locations total 905 well stations in coastal region and hotspot areas including Dhaka.

There are 629 existing groundwater station at different locations of the country under BWDB to manually monitor the status ground water table. Presently, under, BWCSR another 276 nested wells are being installed under package BWDB-W2. In order to obtain real time data for sustainable management of groundwater by automation, sensor with wire will be placed inside the existing 629 as well as new 276 nested wells i.e in total 905 wells at specified depths. Top of the wells will be closed by a metal cap. Checklist of the screening for installations of 276 nested wells under package BWDB W-2, have already been prepared and disclosed. It may be mentioned that there is no appreciable physical work involved in this package except lowering of sensor which might have environmental impacts. As such, it was observed from the screening of this package (BWDB/G-1) that there is no negative impact on environment. Nevertheless, the information that will be collected from these installations will help provide real time status of groundwater table to avoid over withdrawal of groundwater & mining. Ground water quality data of different parameters will also be available from these stations. Thus these installations will contribute to overall positive impact in terms of sustainable management of the groundwater the country.

This disclosure contains an environmental impact screening checklist along with an assessment of environmental impact of 905 nos. ground water well stations under package BWDB-G1.

A handwritten signature consisting of two stylized letters, possibly 'D' and 'J', written in black ink.

\* Information will be collected from these installations that will help provide real time water table data, status of gr. Water & gr. Water quality. Thus this will have positive impact on the Project

\*\*No physical work involve except lowering of sensor connected with wire up to specified level in the well. So, there will be no adverse environmental impact
