

Bangladesh Weather and Climate Services Regional Project (BWCSRP)

Strengthening Hydrological Information Services and Early Warning Systems (SHEWS), Component – B

Disclosure of Social Impact Screening for Costal Automatic Water Level Stations of BWDB under the package G-6

The government of Bangladesh is implementing the Weather and Climate Services Regional Project (BWCSRP) with IDA credit in order to strengthen Government of Bangladesh's capacity to deliver reliable weather, water and climate information services and improve access to such services by priority sectors and communities. The project comprises of three components. Out of three components BWDB is implementing Component –B. There are a number of packages under this component. The package No. BWDB- G-6, 40 Costal Automatic Water Level Stations.

The installation of Automatic Water Level Stations shall be placed in a suitable position with existing bridge structure where ever possible and the final point of installation will be fixed upon discussion and approval of Client.

The locations of Automatic Water Level Stations will also be finalized after discussions with BWDB officials. Different alternative sites were explored for selecting the most suitable sites for installation taking into account concerned social issues. It was observed from the screening that the installations will not require land acquisition, resettlement, relocation and will not have negative livelihood impacts. As all the construction/installation activities will be conducted on BWDB and other government lands through MoU. No negative impacts are expected. During the AWLS installation no need to turn off the bridge or traffic. The sensor will be hanging on the bridge so no space will be required.

However, if any unexpected negative impacts are identified during implementation, project will take necessary steps to mitigate the impacts following the guidelines suggested in SMF and RPF. On the other hand, according to the local stakeholders' opinion, significant positive social and livelihood impacts are expected from the project as installation of the Automatic Water Level Stations (AWLS) will provide real time flood data which will help save lives and properties all over the country. Installation of the above will require only few labors which will not cause any labor influx and working conditions of the labors and safety measures will be ensured. No works will be done/is being done on indigenous people's land.

The disclosure contains assessment of social impact for supply and installation of 40 Automatic Water Level Stations (AWLS) and social impact screening worksheets.
